RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 80 pages. Dimensions: 9.5in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 Excerpt: . . . high, is driven and timbered, and over the caps are inserted four sheetsteel poling-boards. Ahead of A and below it, is driven a second heading B, 8x6 feet; this latter heading serves for the removal of the soil. From heading A a drift is carried right and left toward the haunches, steel poling-boards being inserted and braced by radial struts from the core below. On each haunch and at the same time the drifts D are driven and roofed in a similar manner, working toward the springing lines. When drifts C and D meet an annular space is dug out, 30 inches deep, or the width of the poling-boards; in this space the concrete arch is built on centers in 30-inch sections. The steel poling-boards referred to are made of No. 12 plate, 2 feet by 2 feet 6 inches in plan, and on each of the four sides is riveted a 2 x 2 x $\frac{1}{2}$ -inch angle, each drilled for four bolt-holes, used in connecting the plates. In operation, four crown-plates Fig. 84. --East Boston Tunnel; Atlantic Avenue Station: Method of Building Roof-arch. are inserted endwise at the top of heading A and bolted together and to the rear plates. The lateral enlargement, 5 feet high and 30 inches wide, is roofed in a similar way for every 2 feet gained. Normally, the advance heading is kept about 10 feet in advance of the arch ring. All the material from the headings A and B and...
