CURRENT DEVELOPMENTS IN ANTHROPOLOGICAL GENETICS: ECOLOGY AND POPULATION STRUCTURE

Springer, United States, 2013. Paperback. Book Condition: New. Softcover Reprint of the Original ed.. 228 x 154 mm. Language: English . Brand New Book ***** Print on Demand *****.This volume examines the interrelationship of ecology, subsistence patterns, and the observed genetic variation in human populations. Hence, the book is divided conceptually into the following categories: nonhuman primates, hunters and gatherers, nomads, swidden agriculturalists, peasant farmers, religious isolates, and modern and urban aggregates. While many of these populations have experienced (and are experiencing) acculturation as a result of contact with technologically more advanced groups, the genetic structures described in this volume attempt to reconstruct the traditional patterns as well as genetic changes because of contact. Most chapters also integrate biological (genetic), social, and demographic data within an ecological frame thus presenting a holistic view of the population structures of ecologically distinct groups. The first chapter examines the body of early nonhuman primate literature that emphasized ecological determinism in effecting the population structure of our primate ancestors-relatives. It also examines more recent literature (since 1970) in which it became apparent that greater flexibility exists in primate social structure within specific environmental frameworks. Thus, it appears that our nonhuman primate evolutionary heritage is not one of ecological determinism in social organization but one of flexibility and rapid change suggesting the evolutionary success of our species is based upon a system of flexibility and that social adaptations can be accomplished in a number of diverse ways.
