It should be added that a number of patients, particularly low-grade ones, either did not fixate the disc at all, or allowed the eyes to rove more or less. Analysis Of The Averages. In Tables X, XI and XIII an increase of efficiency or capacity with increasing B-S. age is shown by a progressive diminution of the time of execution. In the corresponding graphs (II, IV and VI) this is shown by a drop in the curves. The Time Needed to Name the Four Colors--Red, Yellow, Green and Blue. The time required to name the four colors, Table X, does, indeed, decrease with increasing B.-S. age, but the decrease from year to year is not very regular, as seen at a glance in Graph II. There are numerous exceptions in the averages for the general population, the children and the adults. The exceptions are least numerous among the girls and women. The differences, however, between the groups, the imbeciles and morons, for all patients, 4 seconds, and especially between Age III and Age XIII, about 7 seconds, are quite considerable. The difference between the averages of Ages VI and VII and of the moron group is much greater for the adults than for the children (3.7 sec. compared with 1.1); for the girls than for the boys (.9 as against .2), and for the men than for the women (6.8 as against 3.1). The sex differences...
