Excerpt from Balansia and the Balansiae in America The hyphae aggregated at certain points on the surface of the hosts, as on leaves or surrounding the culm or the in? orescence, become the basal layer from which the fructifications arise. This basal layer, when it includes host tissues intermingled, is a pseudomorph that has sometimes been termed a sclerotium. Atkinson (1905) used the term pseu dosclerotium for this sclerotic basal stroma containing fragments of host tissue and utilized this feature in distin guishing the genus. His term is not ap plicable to the fungus equivalent in his genus Dot/oicbloee , which does not con tain host tissues intermingled, although it does apply to the structure in the type species of the genus Balamia.
