

Beginnings of Cellular Life: Metabolism Recapitulates Biogenesis

By Professor Harold J. Morowitz

Yale University Press. Paperback. Condition: New. This item is printed on demand. 208 pages. This book is an extraordinary integration of a lifetime of thought on the subject by an exceptional scholar. Morowitz logically, consistently, and persuasively moves to define arguments that will influence thought in a fundamental realm of biology. -Donald M. Engelman, Yale University Morowitz develops a model of the origin of life in which cells originate first, proteins follow, and genes evolve last. This model contradicts conventional wisdom but has the distinct advantage of being testable; and is supported by evidence mustered from biology, biochemistry, and biophysics. Morowitz's expertise in all three disciplines is impressive. -Francisco J. Ayala, Dept. of Ecology and Evol. Biology, University of California, Irvine In this short and clearly written book, Morowitz explores the origins of life. . . . His objective is elegantly achieved. . . . A stimulating analysis . . . and an excellent read. -A. E. Douglas, Times Higher Education Supplement A book rich in provocative and stimulating ideas. . . . I recommend it to anyone who has ever thought seriously about the origin of life. -Vincent P. Cirillo, Quarterly Review of Biology This item ships from La...

Reviews

This ebook can be worthy of a read, and much better than other. I have read and i am certain that i am going to planning to go through again once again in the future. You may like just how the writer compose this book.

-- **Mr. Grant Stanton PhD**

A whole new eBook with an all new standpoint. It is actually rally fascinating throgh reading through time period. You wont truly feel monotony at anytime of your own time (that's what catalogues are for relating to when you request me).
