Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Electromagnetic Shielding Characteristics of Optical-Fiber Connectors The experimental arrangement consists of nested, mode-stirred reverberation cells as shown in figure 1. The cells perform much like common microwave ovens. Power radiated by the transmitting antenna AT establishes an RF field between the cells. The stirring paddles assure that all modes are excited and the resultant fields are isotropic when averaged over time. Since mode stirring is more effective when the modes are closely spaced, reverberation cells are used for frequencies large compared to their fundamental mode. We list the practical lower frequency limits of our reverberation chamber and nested cell together with other pertinent data later in table 1.
