

Biosphere: An Experience in Nerve Chilling Suspense

By Nick Baranda Empasis

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 204 pages. Dimensions: 9.0in. x 6.0in. x 0.5in. Biosphere The structure and composition of the Biosphere is a floating spatial organic matter with plasma. The stage of cellular tissues begins with a slimy mass of protein matter. This organic matter had no freezing or melting point while the equilibrium is attained keenly by the sphere. The bio-protoplasmic sphere (Biosphere) is wrapped in a polyethylene polymer containing waxes, pectin, cellulose and amino acids. These organic substances are capable of deriving and transmitting energy from any source with caloric transmittal and kinetic potential. The transmission of electromagnetic waves could travel through space in a supersonic speed. The spatial location of the sphere is susceptible to the sun's radiant energy. Thus during peak energy levels as the sun radiates through space, the bio-protoplasmic sphere collects the thermal energy of its rays and stores it into the mammoth organic mass. During the accumulation, a latent pressure is brewing as the molecular structure of the organic substances is excited. The caloric value of energy as felt by its most sensitive nerve fibers and sifted into its composite organic mass density as stored...

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You won't feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).

-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to look ahead of time and a lot more. I am quite late in starting reading this one, but better than never. I found out this book from my dad and I encouraged this pdf to find out.
