RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 90 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2009. OCLC Number: (OCoLC)316032453 Subject: Carbon sequestration -- United States. Excerpt: . . . 2. Geologic Concepts and Models for Probabilistic Assessment of CO Storage 2 Resources 2. 1. Assessment Units 2. 1. 1. Geologic Concept: Physical Trap and Saline Formation Components The definition of a storage assessment unit (SAU) requires a geologic concept for CO storage. The 2 fundamental storage process described in the conceptual framework for this assessment methodology is retention within geologic formations by permeability barriers. The SAU is a mappable rock package that consists of a porous flow unit for storage that is bounded by a sealing formation (permeability barrier, cap rock, or confining layer). Within the SAU there are two geologic components: the physical traps (PTs), which are three-dimensional containers, and the saline formation (SF), which is the porous flow unit between PTs. The SF is referred to as the saline aquifer in some sequestration literature. The objective of the methodology is to quantify the storage resource within PTs and that portion of the...

Reviews

An incredibly wonderful book with perfect and lucid explanations. It normally is not going to price a lot of. I am just very happy to tell you that this is the greatest pdf we have go through within my personal lifestyle and could be he finest book for at any time.

-- **Bart Lowe**

This is basically the greatest pdf i actually have go through till now. It is definitely simplistic but surprises within the fifty percent in the ebook. I am easily will get a delight of studying a published ebook.
