Aviation Supplies Academics Inc, United States, 2001. Paperback. Condition: New. Second Edition. Language: English . This book usually ship within 10-15 business days and we will endeavor to dispatch orders quicker than this where possible. Brand New Book. This book s emphasis is on judgment and the interface between pilot and environment, addressing both VFR and IFR situations from flight planning on through to arrival, approach, and landing. Richard Collins explains the factors pilots need to consider when making these decisions, supplementing them with examples from personal experience and accident reports. He lays all the factors on the table so pilots have enough information to develop individual and airplane limitations. The author highlights and stresses the importance of negotiating the system of air traffic control and weather services to maximum advantage. The emphasis is on pilot judgment. A flight is affected by winds, storms are always a risk.and considering visibility, an area the regulations cover with a blanket rule that sets the VFR minimums in miles -- this does not take into account differences in speed and a regulation s legality does not guarantee pilot and passenger safety. Yet Richard Collins demystifies the art of aviation, guiding the pilot through...
