Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Juliet Mertz)

PRECURSORES DE TIPO M3S4

Condition: New. Publisher/Verlag: Editorial Académica Española | Síntesis, caracterización y estudio de la actividad catalítica | El petróleo está formado por las fracciones de compuestos saturados, aromáticos, resinas y asfaltenos, que contienen heteroátomos tales como nitrógeno, azufre, oxígeno y metales (vanadio y níquel, entre otros) que son considerados los componentes más problemáticos, durante el proceso de recuperación, transporte y refinación del petróleo debido a la producción de gases tóxicos como los óxidos de nitrógeno y de azufre (NO_x, SO_x) que son muy perjudiciales para el medio ambiente. El incremento en la severidad de las legislaciones ambientales hacia la calidad de los combustibles, ha obligado a los países productores a reducir, por medio de reacciones de hidrotratamiento, el contenido de azufre, nitrógeno, oxígeno, etc. El hidrotratamiento catalítico (HDT) es un proceso que consiste en eliminar heteroátomos contaminantes (S, N y metales), así como saturar moléculas aromáticas, empleando hidrógeno. Con esta investigación se busca mejorar el proceso de hidrotratamiento, mediante la búsqueda de nuevos materiales catalíticos que permitan eliminar los heteroátomos antes mencionados presentes en el crudo obtenido en el país que principalmente es extrapesado y así cumplir con las normas y leyes | Format: Paperback | Language/Sprache: spa | 68 pp.
