Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Sooty Mold of the Orange and Its Treatment As nearly as can be determined, the fungus is entirely superficial on the leaf and is easily removed. Frequently the fungous membrane becomes detached at some point and is caught by the wind and torn off. These detached fragments are found scattered about in badly affected groves. By drying and stretching, the fungous membrane becomes partially detached and adheres only to the edges of the leaf, which are usually slightly rolled up, thus holding the membrane suspended over the face of the leaf. In this condition it is easily dislodged. Occasionally small knob-like projections occur on the cells of the mycelium, but no proof has been found that these penetrate the tissue of the leaf or in any way act as haustoria. Apparently they are merely organs of attachment. This conclusion has also been reached by Biisgen 2 and Farlow3 in their studies. Large disks (hyphopodia) are also frequently developed, and these evidently serve as organs for attaching the fungus more firmly to the leaf.
