

Optical characterization of novel PDLC systems

Filesize: 7.54 MB

Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

OPTICAL CHARACTERIZATION OF NOVEL PDLC SYSTEMS

To save **Optical characterization of novel PDLC systems** PDF, make sure you refer to the button below and save the file or have access to other information which might be have conjunction with OPTICAL CHARACTERIZATION OF NOVEL PDLC SYSTEMS book.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Thermo- and Electro-Optical Analysis of Polymer Dispersed Liquid Crystal systems | The objective of this research was to prepare PDLCs systems with improved liquid crystal/polymer composition for thermo- and electro-optical performance. Two thermosetting matrices based on an unsaturated polyester resin and a bifunctional epoxy resin, respectively, are employed to realise PDLCs. At a second step, different dopants are used in order to prepare dye-doped PDLC (D-PDLCs) epoxy based films. The dyes contribute to an increase in light absorption, thus reducing remarkably the power necessary to induce nonlinear optical effects. A complete optical, thermo-optical and electro-optical characterisation, a morphological study, and finally an analysis of some nonlinear optical effects in these materials is performed. A comparison of the optical properties between D-PDLCs and undoped PDLCs is presented. Linear and nonlinear effects occurring in these materials, such as self-transparency, thermally induced optical bistability and optically induced light modulation, are studied. This work confirms that PDLCs with optimised optical properties can be considered for the design of a range of different important optical devices. | Format: Paperback | Language/Sprache: english | 223 gr | 156 pp.
