Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

Excerpt from Statistical Analysis of Gait Patterns of Persons With Cerebral Palsy Unfortunately, in spite of the continued improvement in the instrumentation and methodologies of evaluating human performance, objective measurements of human performance still lack the widespread everyday clinical utility that X-ray currently has, owing to the inability of the clinician to properly interpret the data. The major reason for this is that the evaluation of human movement requires the monitoring of many movements and many forces creating these movements, each one needing to be monitored many times in a given time period. And the problem of properly interpreting this vast amount of data is formidable. (see however, Sutherland et al for a statistical study of the development of mature gait.) In this paper, the gait measurements obtained for 62 Cerebral Palsy patients at Boston's Children's Hospital are used to illustrate how various statistical methodologies including clustering procedures and classification rules can be usefully applied to the analysis and interpretation of human movement data.
