By American Society of Civil Engineers

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: .from excavation, stone and gravel especially, are then dumped on the upper side and outer end. If the outer end is well protected in this way, the dam is rarely injured. The training wall consists of two rows of piles 6 ft. apart, driven 8 ft. between centers, rilled with brush from any live timber. The bottom layer is made of saplings fastened with wire in sections 30 ft. long, placed at right angles to the current, projecting 15 ft. in front and 9 ft. in rear of the wall. This layer is loaded with stone or gravel. Above this are packed tiers of brush cross-ways to the first, between the piles to their tops, which are left 4 ft. above low tide. The piles are then bound together in both directions near their tops with No. 12 galvanized wire wound around them six times. When...
