Brand New Book ***** Print on Demand *****.Excerpt from Geostrophic Vortices on a Sphere A thin spherical layer of an incompressible, inviscid fluid which is held on the surface of a rotating ball by gravitation can be taken for some purposes as an approximation to the Earth s atmosphere. The analysis of the two dimensional vertical motion in such a layer should be useful for the understanding of certain observed meteorological phenomena. In a previous report a linearized analysis was presented under the assumption that the outer surface of the layer is a sphere always concentric to the ball representing the Earth. This report presents a linear analysis in which the outer surface of the fluid layer is allowed to be free but the Coriolis force is assumed to be independent of latitude. This assumption de fines a motion which can be regarded as a first approximation to the actual motion even if the fluid layer is not confined to a narrow band bounded by two circles of latitude.
