

Platform-Independent Development of Robot Communication Software

By Philipp Baer

Kassel University Press Feb 2009, 2009. Taschenbuch. Condition: Neu. Neuware - Robotic appliances have gained significant influence in various fields of computer science research during the last fifteen years. New technologies and the availability of suitable hardware in particular boosted advances in robot development. Most recently, mobility and cooperation turned out as new challenges where in particular biologically inspired systems and swarm robotics are involved. Robot control software is considered highly important in this context, involving challenges for robot software architects: The need to master heterogeneity issues and find suitable interaction schemes that are reconcilable with the capabilities of the wireless communication media. This thesis addresses the platform-independent software development of communication infrastructures for mobile robotic systems. The Spica development framework supports the needs of robot software architects by realising a platform-independent development methodology that rests upon the model-orientated software development paradigm. Spica thereby hides implementation details using abstract models. It explicitly takes into account the circumstance that communication may fail or behave unexpectedly. A model transformation approach creates ready-to-use, platformspecific, and optimised software implementations for specific programming languages from the abstract models. Supportive functionality facilitates collaboration between multiple robots. The distributed resource discovery engine Geminga helps establishing the required...

Reviews

Extensive information for book fans. It is written in basic words and never hard to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Otis Wisoky

This publication is great. It is full of wisdom and knowledge. You will not really feel monotony at any time of the time (that's what catalogs are for relating to when you ask me).

-- Dr. Everett Dicki DDS
