

Epidemiologic Studies of Poliomyelitis in New York City and the Northeastern United States During the Year 1916

By Claude Hervey Lavinder

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .scarlet fever, and diphtheria are strikingly similar in their general outlines, the fatality rate being higher in the ages under 5, tending strongly downward during the years of adolescence, and upward again with adult and middle life. Poliomyelitis departs markedly from the other diseases in the general shape of its curve, showing its lowest rate for the group under five and tending strongly upward for all higher age groups. Like measles, however, its lowest fatality is in the age group of highest incidence. VARIATIONS IN CASE FATALITY BY BOROUGHES. The case fatality by boroughs has been computed and is given in Table No. 56. Table No. 56.--Poliomyelitis, New York City, 1916--Case fatality by boroughs, cases, deaths, and per cent fatality for each age group. The variations in fatality at the various ages are seen to be irregular and without apparent significance. The groups are in many...
