

Modern Trends of Research in Ecology and Environmental Science

By B.K. Dutta, Abhik Gupta

Mittal Publications, New Delhi, 2006. N.A. Book Condition: New. 23 cms. xviii, 233 p.: ill., maps ,Despite having a very rich heritage of biodiversity, India is facing large scale depletion of the forest cover. Anthropogenic activity, felling of trees, rapid industrialisation, urbanisation, habitat destruction and pollution are also leading many of the plant and animal species to extinction and putting some species on the verge of extinction. Similar pattern of destruction of habitat and overexploitation of natural resources are causing depletion of biodiversity in the country as a whole. This book attempts to highlight the problems and different issues relating to biodiversity. It suggests remedial measures in general and for the north-east region in particular. The researches being carried out on the subject have been focused and adequately highlighted. The articles contributed by the established scholars present a fairly comprehensive account of the biodiversity related problems in India and their conservational/remedial measures. The book should be of immense use to students, teachers, scientists, professionals, policy makers and intellectuals in dealing with the problems related to environment and biodiversity conservation.

Reviews

The most effective ebook i at any time study. It can be writter in easy words and phrases and not difficult to understand. I am just pleased to let you know that this is the finest publication i have read within my individual lifestyle and could be he finest publication for at any time.

-- Tania Mosciski

Simply no phrases to describe. It is amongst the most awesome pdf we have read through. Your life period will probably be transform as soon as you complete looking over this publication.
