Not illustrated. 1915 Excerpt: .much deeper than had been believed until then, for at 1,000 meters from the surface photographic plates still received distinct impressions, and certain rays from the most refrangible part of the spectrum penetrate much deeper yet. By an ingenious contrivance which permitted of fishing simultaneously at different depths, naturalists of the Michael Sars were first enabled to study the vertical distribution of a certain number of species of fishes and of Crustacea, and to clear up a number of biological questions. The general results of this expedition have been presented in a very comprehensive work written by the two chiefs, Sir John Murray and Hjort.1 VIII. In the United States, where Maury, Bache, Pillsbury, and others were among the first to scientifically study the sea, there has been a strong trend toward oceanographic studies. At the tropical biological station at Tortugas, Fla., founded by the Carnegie...
