Cambridge University Press Camb, Cambridge. Hardcover. Condition: New. First Edition (Unstated).. 656 pages. Hardcover, no dustjacket. New book. MEDICINE. One third of people after stroke, having survived the first few weeks, return home with significant residual disability, and can therefore benefit from an active, multidisciplinary rehabilitation program. This is a comprehensive guide to rehabilitation after stroke, in which leading international authorities set out the basic neuroscientific principles that underlie brain recovery, including chapters on neural plasticity and neural imaging, and describe appropriate rehabilitation strategies for the many different functional problems that can arise after stroke. These include movement disorders, sensory loss, dysphagia and dysarthria, problems with continence and sexual difficulties, and cognitive disorders. Also covered are measurement of disability and quality of life, assistive technology and vocational rehabilitation. It is therefore an essential handbook and reference for all members of the multidisciplinary stroke rehabilitation team, including medical personnel, therapists, clinical neuropsychologists and rehabilitation nurses. The essays included in this book are: 1. Strokes: background / epidemiology / aetiology / avoiding recurrence Gabriel R. de Freitas, Daniel C. Bezerra, Alexandre B. Maulaz and Julien Bogouslavsky; 2. Principles of recovery after stroke Bruce H. Dobkin and Thomas S. Carmichael; 3. Regenerative ability in the central nervous system Barbro B. Johansson; 4.
