Evaluation of Measurements Collected with Multi-Parameter Continuous Water-Quality Monitors in Selected Illinois Streams, 2001-03: Usgs Scientific Investigations Report 2005-5060

Filesize: 4.34 MB

Reviews

The publication is easy in read through preferable to fully grasp. It is writter in simple phrases instead of hard to understand. You will not sense monotony at at any moment of your respective time (that's what catalogs are for concerning if you request me). (Kevin Bergstrom Sr.)

EVALUATION OF MEASUREMENTS COLLECTED WITH MULTI-PARAMETER CONTINUOUS WATER-QUALITY MONITORS IN SELECTED ILLINOIS STREAMS, 2001-03: USGS SCIENTIFIC INVESTIGATIONS REPORT 2005-5060

To get Evaluation of Measurements Collected with Multi-Parameter Continuous Water-Quality Monitors in Selected Illinois Streams, 2001-03: Usgs Scientific Investigations Report 2005-5060 eBook, remember to access the button beneath and download the ebook or have access to other information which are related to EVALUATION OF MEASUREMENTS COLLECTED WITH MULTI-PARAMETER CONTINUOUS WATER-QUALITY MONITORS IN SELECTED ILLINOIS STREAMS, 2001-03: USGS SCIENTIFIC INVESTIGATIONS REPORT 2005-5060 book.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. Dimensions: 9.7in. x 7.4in. x 0.1in.Eight streams, representing a wide range of environmental and water-quality conditions across Illinois, were monitored from July 2001 to October 2003 for five water-quality parameters as part of a pilot study by the U. S. Geological Survey (USGS) in cooperation with the Illinois Environmental Protection Agency (IEPA). Continuous recording multi-parameter water-quality monitors were installed to collect data on water temperature, dissolved-oxygen concentrations, specific conductivity, pH, and turbidity. The monitors were near USGS streamflow-gaging stations where stage and streamflow are continuously recorded. During the study period, the data collected for these five parameters generally met the data-quality objectives established by the USGS and IEPA at all eight stations. A similar pilot study during this period for measurement of chlorophyll concentrations failed to achieve the data-quality objectives. Of all the sensors used, the temperature sensors provided the most accurate and reliable measurements (generally within 5 percent of a calibrated thermometer reading). Signal adjustments and calibration of all other sensors are dependent upon an accurate and precise temperature measurement. The dissolved-oxygen sensors were the next most reliable during the study and were responsive to changing conditions and accurate at all eight stations. Specific conductivity was the third most accurate and reliable measurement collected from the multi-parameter monitors. Specific conductivity at the eight stations varied widely-from less than 40 microsiemens (S) at Rayse Creek near Waltonville to greater than 3, 500 S at Salt Creek at Western Springs. In individual streams, specific conductivity often changed quickly (greater than 25 percent in less than 3 hours) and the sensors generally provided good to excellent record of these variations at all stations. The widest range of specific-conduc
