THE COMPLEX FAULTING PROCESS OF EARTHQUAKES

Springer. Hardcover. Condition: New. 195 pages. Dimensions: 9.5in. x 6.2in. x 0.7in. This book extends our understanding of the faulting process of natural earthquakes as a complex system. The complex faulting process is generally described by considering a deterministic source (coherent rupture) and a stochastic source (incoherent ruptures). Long-period and short-period approximations provide the scaling law of deterministic and stochastic source parameters of natural earthquakes in a general manner. New concepts of stochastic scaling and non-linear scaling law are introduced to...
