Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt: .pressure. The evidence furnished by Leitmeier s experiment, on the other hand, is much more important in this connection. But his results are difficult to understand, since other experimenters have consistently obtained negative results when the same constituents were employed, under almost identical conditions. Even when the magnesium solutions were many times more concentrated than those used by Leitmeier no dolomite was obtained. In the writer s experiments in which the effect of MgCl and MgS04 was tried on CaC03 at many concentrations, absolutely no trace of dolomite could be found in the residue when it was tested in the most careful manner with Lemberg s solution. To be sure, small transparent crystals were present which failed to take the stain and which suggested dolomite in several particulars, but these were insoluble even in hot, concentrated acids and the conclusion was forced that they represented quartz grains derived from the corrosion of the glass of the containing flasks. For the present, therefore, it seems best to hold Leitmeier s observations in question. If further work should demonstrate the correctness of his observations, then here we would have valuable data bearing on the possible dolomitization of limestone at ordinary temperature and pressure by a dilute solution of magnesium, and many puzzling features of this process would be explainable. The high temperature experiments, although they have frequently yielded dolomite, cannot be regarded as having a direct bearing on the problem at hand, as all the evidence goes to...
