To describe a square in a given triangle. 2. Given the hypotenuse of a right-angled triangle, and the side of an inscribed square: required the two sides of the triangle, (1) when the given side coincides with the hypotenuse, and (2) when it does not so coincide. 3. In a given square to inscribe another square having its side equal to a given straight line. To what limitation is this line subject? 4. To find a triangle such that its sides and a perpendicular on one of them from the opposite angle are in continued geometrical progression. 5. Through a point M equidistant from two straight lines AA, BB at right angles to each other, to draw a straight line PMQ, so that the sum of the squares upon PM and MQ shall be equal to the square upon a given line b. 6. To inscribe a semicircle in a quadrant. 7. To inscribe a circle in a given sector of a circle. 8.
