RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Original publisher: Reston, Va. : U. S. Dept. of the Interior, U. S. Geological Survey, 2007. OCLC Number: (OCoLC)182616285 Subject: Nutrient pollution of water -- Wabash River Watershed. Excerpt: . . . Study Methods 7 average algal cover at the sampled reach and these subsamples Biological-community (fish and invertebrates) samples were composited into a single sample (Charles and others, were collected one time, June through October 2003, at each 2000). site by IDEM personnel following standard IDEM methods Seston samples were collected in the center of the sam-(Indiana Department of Environmental Management, 1992, pling reach along a line that extended from the left edge to the 2002; Barbour and others, 1999). IDEM personnel calculated right edge of the streambank (transect). The wetted channel the biological-community attributes and metric scores for width and water depths (one-quarter, one-half, and three-quar-this study. Attributes are the raw data and metric scores are ters points) along the chosen transect were recorded. The ses-rankings of the data from poor (a score of one), fair to good (a ton samples were collected with a 3-L bottle and a 0. 476-cm score of three), and excellent (a score of 5). The metric scores nozzle; either a grab sample or a multiple vertical method was are ranked using a large data set that includes unimpaired used (Shelton, 1994). reference sites to impaired sites. Each attribute has a corre-Algal-biomass samples were collected, homogenized, and sponding metric score (Dufour, 2002). A list of the fish and filtered onto glass-fiber filters in the field by USGS personnel. invertebrate attributes and metrics are listed in appendix 1. All filters...
