Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Review of Selected North American Mitrate Stylophorans (Homalozoa, Echinodermata) In this brief introductory look at the homalozoans and other recumbent echinoderm groups (pleurocystitids and rhipidocystians), I suggest that the overall morphologic similarity displayed by all of these groups is due to convergence brought on by adaptation to similar bottom-living habits. Generally all of these forms have a high degree of thecal streamlining and bilaterality (but rarely are they truly bilateral). In most, a rim of substantial marginal plates surrounds the flexible polyplated central surfaces on both inferior and superior surfaces. In some, one or both somatic surfaces are also regularized into rigid surfaces. Ventral or inferior surfaces are commonly concave, with the margins serving as runners or skids to minimize adhesion to the bottom. In many forms, appendages such as columns, steles, and aulacophores were adapted to serve locomotor functions. These recumbent forms not only exploited a similar food source, but in doing so exercised some degree of vagility in moving from place to place using their elongated appendage, or, minimally, were sufficiently vagile to favorably orient themselves on the sea floor relative to nutrient-bearing currents. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state...](#)
