

Molecular Dynamics Simulation of Strongly Coupled Dusty Plasma

By Mahmuda Begum

LAP Lambert Academic Publishing. Taschenbuch. Condition: Neu. Neuware - Dusty plasmas have opened up a completely new and fascinating line of research in the field of plasma physics. The collisions among charged dust grains and between charged grains and neutrals play a significant role in complex plasmas. The charged micro-particles can be visualized individually due to their comparatively large size which provides experimental investigations with high temporal and spatial resolution. Dusty plasmas, therefore enable to investigate a vast variety of novel phenomena, like self-organizations, strong-coupling effects, phase transitions, waves, transport properties, etc. at the most fundamental kinetic level. Dusty plasma research has made remarkable progress in the investigations of some fundamental and generic processes ranging from nanofluidics to crystallization at the kinetic level which help us to advance into other fields of research. This highlights the 'interdisciplinarity' nature of the dusty plasma research. This book presents a computational study of thermodynamics and transport properties of strongly coupled dusty plasma using Molecular Dynamics (MD) simulation both in presence and absence of external magnetic field. 164 pp. Englisch.

Reviews

Certainly, this is actually the very best job by any author. It really is rally exciting through studying time. You may like how the blogger write this pdf.
-- Rudolph Jones MD

Completely essential go through ebook. I was able to comprehended almost everything using this created e pdf. You will not sense monotony at anytime of your time (that's what catalogs are for relating to if you request me).
-- Timmothy Schulist
