Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt:  $r = a(1 - \cos \theta)$ ; prove that the fixed and moving centrodes are circles. 14. A straight line ACB slides on a fixed curve, the middle point C being always in contact with the curve; if  $1/p$  is the curvature at C, and  $1/r$  and  $1/s$  are the curvatures of the paths of A and B, and if  $AB = 2c$ , prove that 15. A given point in a straight line moves along a given diameter, produced, of a given circle, and the straight line always touches the circle; prove that this motion is equivalent to the rolling of a parabola upon the curve,  $ay = (a + ay(2ax + x))$ , the parabola starting with its vertex at the origin. 16. The end P of a finite line PQ travels on a closed curve which has no points of inflexion, and the line PQ is inclined at a constant angle to the normal at P. Find the area included between the locus of Q and the curve, and shew that if O be the centre of curvature at P the motion of Q is perpendicular to QO. 17. Two tangents, inclined to each other at a given angle, move round a closed curve without cusps, or points of inflexion, and the external angle is divided into two constant parts a and B; prove that the length of the envelope of the dividing line is to the length of the given curve, as  $a - B$ .  $a + B \cos$ ---is to...
